EHS Support℠
Consider it Done®

WATER RESOURCES
CAPABILITIES & EXPERIENCE

EHS Support is a global family of engineers, geologists, scientists, and technical experts who specialize in complex, environmental, and health-and-safety challenges. Located across North America, Australia, New Zealand, Europe, and South Africa, our team brings diversified national and international experience to the table, having successfully completed projects in over 100 countries. We're problem solvers. It's what we do.

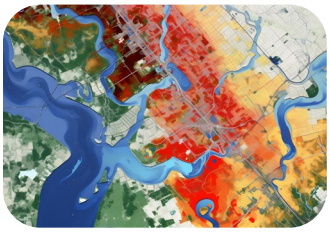
WATER RESOURCES CAPABILITIES

All water has value, and water usage intersects every site in one way or another. Whether managing the discharge of stormwater from active facilities or assessing the fate and transport of contaminants from legacy operations, the relationship between industrial processes and the natural world often runs across pipes, streams, and coastlines. The challenge is balancing the regulatory obligations related to these critical resources with the ongoing operations, needs, and day-to-day workload of each facility.

EHS Support provides a comprehensive range of water resource solutions including:

Stormwater Design and Permitting

Surface-Water Hydrodynamics



Groundwater Flow and Hydrogeology

Contaminant Fate and Transport

Water Quality and Habitat Restoration

Flood Control and Impact Assessment

Climate Change and Coastal Resiliency

Water Treatment and Systems

OUR WATER RESOURCES SERVICES TEAM

We are much more than the sum of our parts. Our Water Resources Services Team is comprised of experts who deliver forward-thinking solutions throughout every stage of the project lifecycle. Collaboration is at the center of what we do. We work closely with clients and stakeholders, prioritizing clarity, transparency, and success. We pride ourselves on being strong communicators and skilled writers, delivering information with precision and purpose. Armed with in-depth industry knowledge and a passion for solving complex challenges, we bring the expertise and determination needed to execute projects of any scale. As steadfast advocates for our clients, we're always growing our team and expanding our capabilities to better serve you. Our team does more than just identify problems—we provide solutions.

Water Quality & Habitat Restoration

- NPDES permit compliance & advocacy
- Dam removal & habitat restoration design
- Wetland restoration & mitigation support
- NRDA support & water quality credit trading
- Wetland delineation & permitting support
- Ecological & habitat diversity assessments
- Flood risk assessments
- Long-term facility stormwater management planning

Stormwater Design & Permitting

- Drainage system modeling & engineering
- Regulatory compliance & data visualization
- Stormwater treatment & conservation
- Climate resiliency & sustainability

Surface Water Hydraulics

- Flood risk assessments & hydraulic studies
- Contaminant fate & transport assessments
- Streambank stability & geomorphology
- Coastal & geomorphologic assessments
- Water withdrawal & supply assessments

Groundwater & Hydrogeology

- Groundwater fate & transport modeling
- Extraction & reuse assessments
- Treatment system design & permitting
- Recharge modeling, design, & permitting
- Water supply banking & underground storage

Our team of experts – scientists, engineers, geologists, and hydrogeologists – recognize the critical importance of developing sustainable management solutions for surface water and groundwater resources. Our technical capabilities are further complemented by regulatory specialists versed in compliance and permitting at federal, state, and local levels. As a result, you get local expertise combined with a global reach, all with a focus on advocacy, communication, and teamwork.
