Environmental compliance is an integral part of site development and use, facility operations, and supply chain management, and often involves navigating complex federal, state, and local environmental laws and regulations. Our compliance expertise is what sets us apart. EHS Support helps our clients interpret the environmental laws and regulations and establish and maintain systems for regulatory compliance. We identify approval requirements early and manage them through the construction process and beyond, offering practical and reliable recommendations based on our extensive industrial and operational experience in many sectors.

ENVIRONMENTAL COMPLIANCE BY DESIGN

Our "Compliance by Design" approach for your organization will give your organization confidence in demonstrating compliance. We focus on you, the client, to identify the environmental aspects and impacts of your projects so they are planned, built, and operated on budget and schedule, while promoting sustainable outcomes aligned with your company's business objectives. We offer a streamlined approach to permitting and implementing regulatory requirements and developing and negotiating applicable permit conditions, staying on top of the latest regulatory developments.

Our staff will help your company at any level, from preparing an environmental compliance program to temporarily supporting your facility in-between hires.

COMPLIANCE IS OUR CORE COMPETENCY

We understand that companies must comply with environmental laws and regulations during pre-construction, construction, and operational phases of a project, which may require approvals and permits and other regulatory obligations along the way. The nature and scale of permitting and other regulatory requirements is unique to each project and determined by the size of the project (i.e., land disturbance), the effects on waterways and adjoining properties, waste generation, chemical use, odors, noise, energy and water use, zoning, traffic, and other potential impacts. Our team of experts have worked on an extensive array of environmental compliance projects including detailed environmental impact assessments, specific environmental studies to support environmental permits and approvals, and compliance permitting.

ENVIRONMENTAL COMPLIANCE SERVICES

Our environmental compliance team can provide support your company with services such as:

Air Emissions (Clean Air Act)
