Navigating the complex world of air regulations can be intimidating if you don't specialize in permitting and compliance. Regulations can be complicated, multi-layered, and site-specific based on a facility's size, industry, and location.

At EHS Support, our experienced team of air compliance experts will help you interpret federal, state, and local air regulations so you can achieve and maintain compliance while avoiding potentially costly fines.

As your partner, we will guide you through the rules and regulations, and work with you to overcome the challenges presented by an ever-changing regulatory landscape. EHS Support takes an approach to air permitting and compliance that is tailored to each client, and develops strategies based on your individual needs while optimizing your time and budget. Our goal is to bridge the gap between industry and the regulator to help you achieve compliance while maintaining operational flexibility and minimizing the impact on your bottom line.

AIR QUALITY PERMITTING

We streamline the permitting process for our clients while negotiating permit terms and conditions that minimize regulatory burden and maximize operational flexibility. Our experienced air quality professionals can provide support with the following air quality permitting services:

- Air permitting applicability evaluations
- Construction/installation permit applications
- State and federal operating permit applications
- Minor, synthetic minor, and Title V permitting
- Air permit modifications and renewals
- Synthetic minor strategies
- Exemption and regulatory applicability determinations
- Air dispersion modeling, including criteria pollutant and toxic air contaminant impact evaluations
- Permit review and negotiations
- Permit compliance strategies and planning
- Environmental justice reviews

AIR QUALITY COMPLIANCE

We partner with our clients to develop proactive compliance strategies and management systems aimed at simplifying complex regulatory requirements. We assist our clients with initial and ongoing compliance obligations and deliver a product that presents value while exceeding the standards of the regulator. We have experience working with state and federal regulatory agencies across the country, and regularly provide support for clients with the following services:

- State and federal regulatory and compliance reporting
- Greenhouse gas reporting
- Air emissions inventories
- Applicability determinations for state and federal standards, including:
  - New Source Performance Standards (NSPS)
  - National Emission Standards for Hazardous Air Pollutants (NESHAP)
  - Maximum Achievable Control Technology (MACT) Standards
- Regulatory compliance strategies
- On-site compliance support
- Training
- Air compliance tools and management systems, including spreadsheets, databases, and environmental management software systems
- Air quality inspections and audits
- Regulatory agency inspection and information collection support
- Enforcement support and responses to notices of violation and consent orders
- Performance testing support
- Refrigerant compliance
- Toxic Release Inventory (TRI) reporting

Our team has assisted clients with their air permitting and compliance needs across the following industries:

- Anodizing & Electroplating
- Automotive
- Brick & Structural Clay Products Manufacturing
- Cannabis Products Manufacturing
- Electric Power Generation & Storage Systems
- Food & Beverage
- Hospitals & Biomedical Technology
- Plastics & Plastic Composites Manufacturing
- Quarries & Material Handling
- Steel & Metals Manufacturing
- Surface Coating & Printing Operations
- Textiles Manufacturing
- Wood & Forest Products
